Use Case Descriptions

Use Case: Interact with each county
Primary Actor: Users
Goal in Context: Let users click any NJ county to see that county's graphical analysis based on its data.
Preconditions: User is on the map page with the NJ map with counties
Trigger: User clicks on a county
Scenario:

- User is on NJ map page
- User clicks on a county
- Selected county links to a page with that county's graphical data and contact info for that county's officials

Exception:

- Not on map page: get on map page

Priority: Essential
When available: First increment
Frequency of Use: Every time on map page
Channel to actor: Via map page

Use Case: Access contact methods for county officials
Primary Actor: Users
Goal in Context: Provides contact info for the specified county's officials
Preconditions: User clicked onto a county from map page
Trigger: Is on a county's data page
Scenario:

- User is on NJ map page
- User clicks on a county
- Selected county links to a page with that county's graphical data and contact info for that county's officials

Exception:

- None?

Priority: Essential
When available: First increment
Frequency of Use: Every time on county page
Channel to actor: county is selected from map page

Use Case: See charts/graphs of data
Primary Actor: Users
Goal in Context: Provides visual analysis of county's data
Preconditions: User clicked onto a county from map page
Trigger: Is on a county's data page
Scenario:

- User is on NJ map page
- User clicks on a county
- Selected county links to a page with that county's graphical data and contact info for that county's officials

Exception:

- None?

Priority: Essential
When available: First increment
Frequency of Use: Every time on county page
Channel to actor: county is selected from map page

Use Case: Insert/Edit datasets used for each county
Primary Actor: Administrator
Goal in Context: Modify county datasets
Preconditions: Admin is within the repository location and in the program folder
Trigger: None
Scenario:

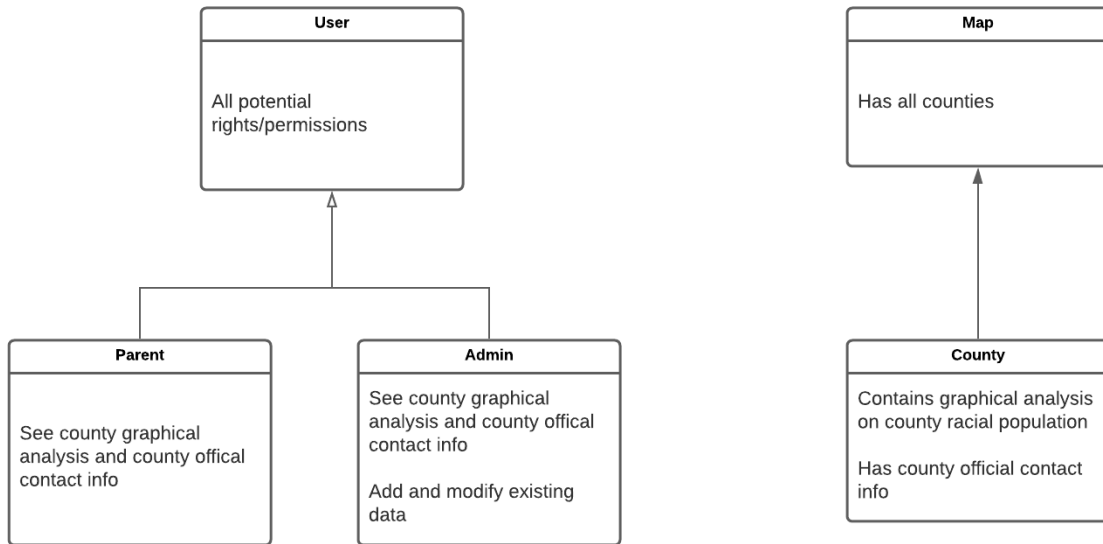

- Admin goes within dataset folder containing datasets and sourcecode
- Admin inserts new data or modifies existing datasets, and includes in the sourcecode

Exception:

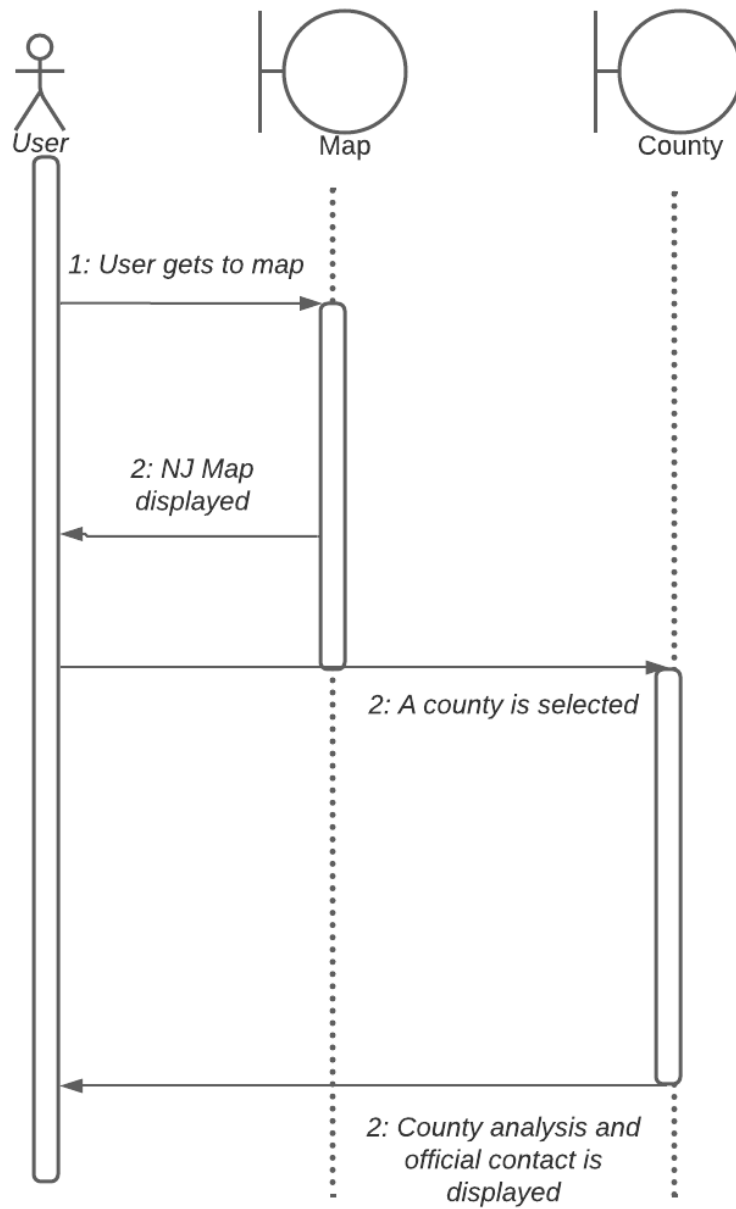

- None?

Priority: Essential
When available: When base program finished
Frequency of Use: Whenever new data needs to be implemented or old data modified

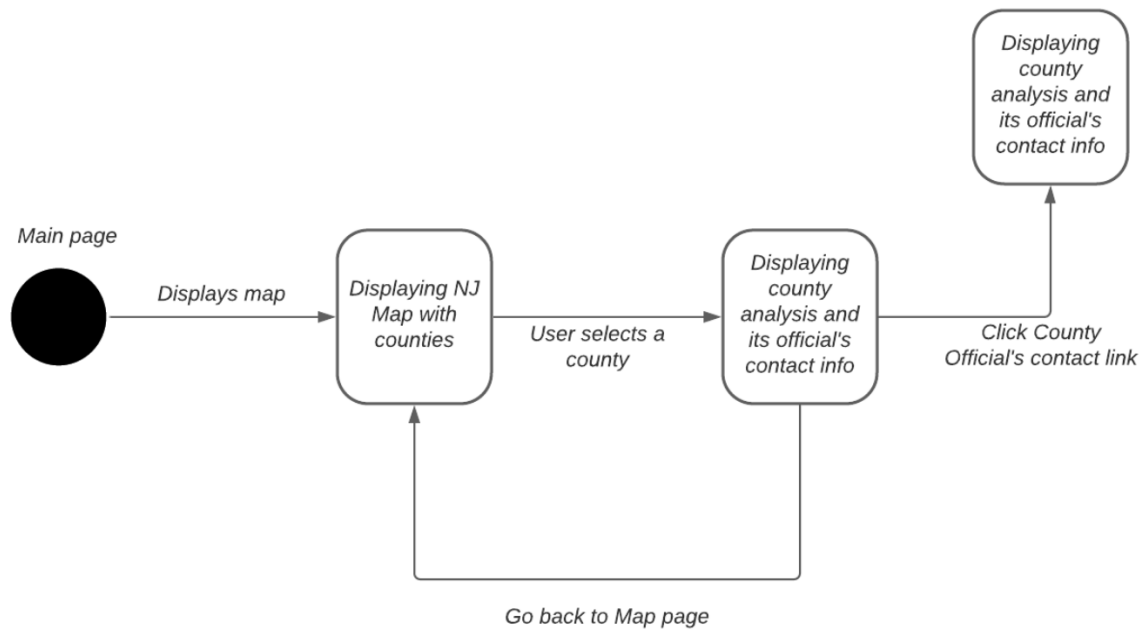

Design Class Diagram

Detailed System Sequence Diagram

Statechart

Test Case Diagram

Functionality Tested	Input	Expected Output	Actual Output
Map	load page, click a county	map should load, clicking a county should load a page with county info	
County data	Clicked a county from map	Page of the right selected county displayed, should have graphical analysis and county official's contact info
